EXPERIENCE

Faculty Member — Institute for Advanced Study, Princeton

1933 – 1955

- Pursued unified field theory as one of the Institute's first faculty members, serving from his 1933 appointment until his death in 1955.
 - Advanced research across gravitation, quantum theory, and statistical physics through papers, lectures, and correspondence with international scientists.
 - Communicated complex technical ideas through academic publications, public-facing writing, and invited lectures.
- Skills: Mathematical Modeling, Research Strategy, Scientific Communication, Cross-Functional Collaboration*

Professor / Academy Member — Prussian Academy of Sciences, Berlin

1914 – 1933

- Developed the general theory of relativity, creating a predictive model that explained gravitational lensing, orbital precession, and cosmological dynamics.
 - Designed thought experiments and analytical workflows to challenge assumptions, reduce hidden variables, and surface falsifiable predictions.
 - Published foundational work on gravitation, cosmology, quantum theory, and statistical mechanics while based in Berlin.
- Skills: Theory Design, Problem Decomposition, Mentorship, Systems Thinking*

Technical Expert — Swiss Patent Office, Bern

1902 – 1909

- Reviewed electromechanical patents for novelty, implementation feasibility, and technical clarity under strict documentation standards.
 - Evaluated synchronization, signal transmission, and measurement systems, improving ability to reason from engineering constraints to core principles.
 - Produced concise technical decisions for high-volume applications while maintaining accuracy and repeatable review criteria.
- Skills: Technical Review, Electromechanical Systems, Documentation, Prior-Art Analysis*

SELECTED PROJECTS

- **General Relativity** – Unified acceleration and gravity into a geometric theory with measurable astronomical predictions.
- **Photoelectric Effect** – Modeled light quanta to explain electron emission behavior and support modern quantum theory.
- **Brownian Motion** – Converted microscopic particle motion into statistical evidence for atomic theory.
- **Mass-Energy Equivalence** – Derived a compact relationship connecting mass and energy across physical systems.

TECHNICAL SKILLS

Core: Mathematical modeling, analytical reasoning, uncertainty reduction, hypothesis testing
Domains: Relativity, quantum theory, statistical mechanics, electrodynamics, cosmology
Methods: Differential geometry, tensor calculus, stochastic processes, dimensional analysis
Tools: Technical writing, patent review, lecture design, peer review, public communication
Languages: German, English, French

AWARDS & HONORS

- **Nobel Prize in Physics** – Awarded for services to theoretical physics and discovery of the law of the photoelectric effect (1921)
- **Copley Medal** – Royal Society recognition for outstanding scientific achievement (1925)

EDUCATION

University of Zurich	1905 – 1906
<i>Ph.D. in Physics; thesis submitted in 1905 and degree conferred in 1906</i>	<i>Zurich, Switzerland</i>
Swiss Federal Polytechnic	1896 – 1900
<i>Diploma, School for Subject Teachers in Mathematics and Physics</i>	<i>Zurich, Switzerland</i>
